https://markgodrick.github.io/

Education

2026 – 2031 (expected) **Ph.D. Student, Peking University.** Wangxuan Institute of Computer Technology.

2022 – 2026 (expected) **B.S. in Computer Science, Peking University.** School of Electronics Engineering and Computer Science (EECS).
GPA: 3.689/4.0 (Top 30%)

Research Interests

- Large Language Models (LLM), LLM Evaluation, AI Safety, Reinforcement Learning (RL), Multimodal Learning.

Experience

Autumn 2024 – Spring 2026 **Research Intern,** Wangxuan Institute of Computer Technology, Peking University.

Spring 2026 **Teaching Assistant,** Introduction to Artificial Intelligence, Peking University.

January 2026 **Reviewer,** ACL Rolling Review (ARR).

Publications

1. **Beyond Fixed Benchmarks and Worst-Case Attacks: Dynamic Boundary Evaluation for Language Models**
Haoxiang Wang, Da Yu, Huishuai Zhang
NeurIPS 2026 (Poster), arXiv:2605.06213

   We study how to evaluate the dynamic capability boundaries of language models beyond fixed benchmarks and worst-case adversarial attacks. The framework uses skill-guided search and difficulty calibration to adaptively locate model-specific boundary cases, providing a more informative view of what a model can and cannot solve.

2. **Synthesize Privacy-Preserving High-Resolution Images via Private Textual Intermediaries**
Haoxiang Wang, Zinan Lin, Da Yu, Huishuai Zhang
NeurIPS 2025 (Poster)

   We propose SPTI, a training-free method that shifts differentially private (DP) image synthesis from the image domain to the text domain. SPTI summarizes private images into textual descriptions, applies DP text generation, and reconstructs images via text-to-image models. It substantially outperforms prior DP approaches on high-resolution benchmarks (e.g., FID 26.71 vs. 40.36 on LSUN Bedroom at $\varepsilon = 1.0$).

Honors & Awards

2026 **Outstanding Undergraduate Thesis,** Peking University.

October 2025 **Zhiban Scholarship,** Peking University.

2023 **Academic Excellence Award & Huawei Scholarship,** Peking University.
